GENERAL INFORMATION

This publication contains prescription (Rx) and selected over-the-counter (OTC) drug product information supplied to the Food and Drug Administration (FDA) under the provisions of the Drug Listing Act of 1972 (Title 21, Code of Federal Regulations, Part 207).

A National Drug Code (NDC) number has been assigned, by the marketer, to each product appearing on this listing. The NDC is a unique 10 digit, 3 part number to identify a trade-packaged drug product. The first segment, the Labeler Code, is assigned by FDA. A "labeler" is any firm that manufactures or distributes a drug product under its own trade name (label). The second segment of the NDC, the Product Code, identifies a specific strength, dosage form, and formulation for a particular labeler. The third segment, the Package Code, identifies trade package sizes. Both the product and package codes are assigned by the labeler. The NDC (labeler-product-package) will be in one of the following configurations: 4-4-2, 5-3-2-, or 5-4-1.

STATUS (Product)

NEW	=	New product submitted for the first time or change in active ingredient, strength, dosage form, product name, route of administration, etc. which requires a new National Drug Code Number.
CHANGED	=	Additional package size, deletion of package size, or other similar type product updates not requiring a new National Drug Code Number.
DISCONTINUED	=	Product discontinued or no longer marketed by firm.
